800 Powell St. San Francisco, CA 94103

Location for Unloading and Loading:

- All vendors are required to unload and load their equipment from Miles Court, situated behind the Clubhouse. There is no designated vendor parking available. Once you've completed loading in, please move your vehicle promptly. Parking is not permitted in Miles Court or in the white zone in front of the building.

- The front desk agents are available to assist hotel guests and provide directions. However, they are not part of the Catering Department or event personnel. Therefore, refrain from requesting assistance with load-in, set-up, or moving furniture from the

Accessing the Venue:

- The back door is locked, please contact the front desk at

[415-781-0900](tel:415-781-0900) to request access. Ensure to close the

door securely behind you for security purposes.

- The designated door for load-in is the far left one when viewed from the street.

Elevator Usage:

- Service Elevator: Located down the hallway, take a right at the end. Identify the door with the small window. Ensure the metal gate is fully closed upon exiting the elevator. For 3rd floor deliveries, this will lead to the kitchen area, so please be mindful during operational hours. For 4th floor deliveries, the service/freight elevator access is near the library.

- Passenger Elevator*: Located down the hallway, take a left at the end followed by a right into a dead-end hallway. The elevator is situated on the left. However, please refrain from using the passenger elevator without clearance from UClub staff. It is only to be used for 3rd floor deliveries when instructed.

Equipment Transportation:

- Please provide carts or trolleys for transporting equipment to the required floors. Although onsite carts are available, we unfortunately cannot guarantee they will be accessible for vendor use.
- All equipment must be adequately padded to prevent damage to the brass paneling in the elevator. Any damages incurred during load-in will result in fines for the client and potential banning of the ven

Claude sent me a message on Telegram after making updates in Figma. Sounds like something surreal if you say that a while ago. But this is the designer workflow in Feb 2026. Let me break down what that actually means.

When I started running simultaneously up to 5 agents, the actual response time increased due to complex work via the bridge. A couple of days ago, I got an idea: "What if Claude can notify me on Telegram when the job is done or if something is wrong?".

Based on the feature, I could create a complex working plan for subagents on the same project but

in line. They probably need around 15-20 minutes to complete the job. During this time, I can do groceries, chores, etc. So, I need a fast response from the model if something is wrong or done. I'm using Telegram daily as the main app for communication, so it makes sense to receive Claude message right here. Based on these thoughts, I started from the plan.

How it was built:

1. Telegram bot was created.
2. Connected tg bot to Claude.
3. Connected Claude to Figma.
4. Added custom Claude rules on changes in Figma (leave a comment if something is wrong/done; Add Claude Code text to Figma comment).
5. Created a hook in the global json. (When Claude Code leave comment in Figma, send a message to the bot chat).
6. Applied the rule for message structure. I can click the link and see what's happening right from the phone (or desktop).

I'm impressed by how rapidly AI technologies are growing day-by-day. You can do anything you want, just start with the problem-solving plan.

A Guardian investigation of Amazon found AI tools are not always helping employees do their jobs better. In many cases, they're adding to the workload.

Days after that report dropped, AI-generated code caused a major outage and millions of lost orders. Amazon announced a 90-day reset on how AI code gets shipped.

This is what happens when leadership mandates tools they don't fully understand.

I keep hearing from friends across industries: AI platforms are being pushed onto employees with little training, no oversight, and no real support. The

unspoken message is clear: fully embrace it, or question your value.

That kind of pressure doesn't drive innovation. It drives fear. And fear leads to shortcuts, poor decisions, and the abandonment of guardrails that trusted businesses were built on.

Leaders and investors keep betting AI will solve people and productivity challenges. It can't do it alone. People are still the foundation of strong businesses. AI works best in the hands of people who are supported, trained, and trusted to use their judgment.

Without investment in people, a reckoning is coming. Broken systems. Low morale. A culture that used to take pride in craft, now just trying to keep up. And the cost no one seems to be doing the math on yet: what happens when every employee, every workflow, and every pipeline is running on expensive AI tokens at scale?

 DesignSystems

where do you find good design system examples to learn from

trying to build a design system for our product and need to see how other companies structure theirs. want to understand things like how to organize component variations and what level of documentation is actually useful. are there good examples i can study from real products that have been battle tested?

artificial

You can now give an AI agent its own email, phone number, wallet, computer, and voice. This is what the stack looks like

I've been tracking the companies building primitives specifically for agents rather than humans. The pattern is becoming obvious: every capability a human employee takes for granted is getting rebuilt as an API.

Here are some of the companies building for AI agents:

- AgentMail — agents can have email accounts
- AgentPhone — agents can have phone numbers
- Kapso — agents can have WhatsApp numbers
